

ponnex.dev

SEO / GEO / AEO Audit Report

QUICK AUDIT

Audit date: 2026-06-30

Claude Skill and Plugin by Alex Labat

Executive Summary

ponnex.dev is a technically excellent personal portfolio that already implements the structured-data and metadata practices most sites miss. Every page is server-rendered HTML with self-referencing canonicals, complete Open Graph and Twitter cards, and 100% image alt-text coverage, and the homepage layers rich JSON-LD — Person, ProfilePage, Occupation, FAQPage with seven Q&As, and SpeakableSpecification — that positions it well for both AI answer engines and featured snippets. The most urgent issue is a site-wide template bug: project-detail meta descriptions run 200–333 characters (verified across five pages) and are truncated in search results, so one template fix corrects roughly 22 pages at once. The biggest growth opportunity is original long-form content — as a static portfolio it gives AI engines limited unique text to cite, so a short writing/notes section on frontend, Internet Computer and Web3 topics would meaningfully strengthen GEO and AEO authority.

Dimension	Score	Status	Key Takeaway
SEO	9/10	Strong	Metadata, canonicals, alt text and clean HTML are near-exemplary; only template-level description trimming remains.
GEO	8/10	Strong	Strong entity/E-E-A-T and crawlable HTML; limited original long-form text to cite is the gap.
AEO	8/10	Strong	FAQPage + Speakable + question headings give a rare, strong answer-engine base for a portfolio.
Combined	25/30	Strong overall — a well-optimized portfolio with targeted gaps to close.	

Pages Audited

URL	Page Type	Notes
https://ponnex.dev/	Homepage	Rich JSON-LD (Person, ProfilePage, Occupation, Place, WebSite, FAQPage×7, Speakable). Single H1, 10/10 images with alt. Title 42 chars, description 167.
https://ponnex.dev/projects/	Portfolio index	Good title (57)/description (155)/canonical. 15/15 images with alt. No JSON-LD schema on this page.
https://ponnex.dev/resume/	Résumé	Good meta + canonical. No JSON-LD. Description 193 chars (slightly long). No images (expected).
https://ponnex.dev/projects/sia/	Project detail — Singapore Airlines	BreadcrumbList + CreativeWork schema. Meta description 326 chars — truncated in SERP.
https://ponnex.dev/projects/odin/	Project detail — Odin.fun	Same schema template. Meta description 333 chars — truncated in SERP.
https://ponnex.dev/projects/{bioniq,toniq,palantir}/	Project detail (spot-checked)	Same template confirmed: descriptions 325 / 308 / 200 chars. Confirms a site-wide template issue across ~22 project pages.
robots.txt	Crawl directives	Allows all crawlers; disallows /thankyou only; points to sitemap. Clean.
sitemap.xml	Sitemap	24 URLs listed. No lastmod / changefreq / priority values.

SEO Analysis 9/10

Technical On-Page

Signal	Finding	Status
Title tag	Homepage: “Emmanuel Francis Ramos — Frontend Engineer” (42 chars). Keyword-led, unique per page (Selected Work, Résumé, per-project).	Good
Meta description (homepage)	167 chars — just over the 160 sweet spot but carries a clear value prop and named entities (Vue, Nuxt, React, Singapore Airlines, Toniq, Odin.fun).	Good
Meta description (project pages)	Site-wide template runs 200–333 chars (SIA 326, Odin 333, Bioniq 325, Toniq 308, Palantir 200). Google truncates ~155–160; the rest is wasted. Affects ~22 pages.	Needs Attention
Heading hierarchy	Exactly one H1 per page; logical H2/H3 nesting (homepage 1×H1, 7×H2, 23×H3). No stuffing.	Good
URL structure	Clean, lowercase, keyword-rich, no parameters (e.g. /projects/sia/, /resume/). Trailing-slash consistent.	Good
Canonical tag	Self-referencing canonical present on every page fetched.	Good
Robots / indexability	No accidental noindex. robots.txt allows all, disallows only /thankyou, and references the sitemap.	Good
Viewport / mobile meta	<meta name=viewport width=device-width, initial-scale=1> present.	Good
Image alt text	100% coverage on every page fetched (homepage 10/10, projects index 15/15, project detail 1/1).	Good
Open Graph / Twitter	Homepage: og:title/description/type/url, og:image 1200×630 + og:image:alt, twitter summary_large_image. Project pages use per-project og:image. Index + résumé reuse the generic og.png.	Needs Attention

Content Quality

Signal	Finding	Status
Word count / depth	Homepage is content-rich (about, services, 20 projects, skills, FAQ). Project pages are concise first-person case studies.	Good
Keyword signals	Primary topic unmistakable: frontend engineer, Vue/Nuxt/React/Next.js/TypeScript, Internet Computer/Bitcoin/Web3. Semantic terms present throughout.	Good
Freshness signals	©2026 copyright is current, but sitemap.xml carries no lastmod, so engines have no machine-readable freshness signal.	Needs Attention
Readability	Highly scannable — terminal-style section labels, short paragraphs, bulleted skills/services.	Good

Structured Data

Signal	Finding	Status
Schema present	Homepage layers WebSite, Person, ProfilePage, Occupation, Place, FAQPage (7 Q&A) and SpeakableSpecification. Every project detail page carries BreadcrumbList + CreativeWork (template-wide).	Good
Schema gaps	/projects/ index and /resume/ carry no JSON-LD. An ItemList/CollectionPage (index) and Person/ProfilePage (résumé) would close the gap.	Needs Attention
Schema validity	JSON-LD is syntactically well-formed and uses appropriate, specific @types.	Good

GEO Analysis 8/10

E-E-A-T Assessment

Signal	Finding	Status
Author identity	Named individual, occupation declared, “9+ years” experience stated plainly. Person schema reinforces it.	Good
About page	Dedicated about section + “readme” explaining background and focus (crypto / Internet Computer).	Good
Contact information	hello@ponnex.dev with a “reply within 24h” commitment; reachable from every page.	Good
Trust signals	Real, verifiable marquee clients (Singapore Airlines, Tonic, Odin.fun, Bioniq) + social profiles. No testimonials, recommendations, awards or press mentions yet.	Needs Attention
Brand entity schema	Person + sameAs links to LinkedIn, GitHub, Instagram, Buy Me a Coffee strengthen the entity graph.	Good

Content for AI Synthesis

Signal	Finding	Status
Factual density	Dense with citable specifics: 9+ years, named clients, exact stacks, claims like “sub-second market data” and “legacy JS → Vue/TypeScript without disrupting production”.	Good
Clear claims	Core value proposition stated at the top of every page (“I build fast, polished web applications”; per-project role + outcome).	Good
Source citation	Content does not cite external authoritative sources, which AI engines weight when choosing what to quote.	Needs Attention
Comprehensiveness	Project pages answer what/role/stack/outcome but are brief; deeper write-ups would give engines more to synthesize.	On Track

Signal	Finding	Status
Entity clarity	Name and brand used consistently across pages, schema and sameAs links — unambiguous for entity recognition.	Good
Originality	Unique first-person narratives per project. Volume of long-form, citable text is limited — the main GEO ceiling.	On Track

Technical GEO

Signal	Finding	Status
Structured-data depth	Goes beyond basics: Occupation, ProfilePage and SpeakableSpecification are advanced types few portfolios implement.	Good
HTTPS / security	Served over HTTPS.	Good
Crawlability	Fully server-rendered HTML — all content, headings and schema present without executing JavaScript. No robots blocks on content.	Good
sameAs / brand links	Outbound social profile links present (LinkedIn, GitHub, Instagram, Buy Me a Coffee).	Good

AEO Analysis 8/10

Featured Snippet Eligibility

Signal	Finding	Status
Direct-answer paragraphs	FAQ answers are concise and self-contained — good candidates for featured snippets and People-Also-Ask.	Good
Definition patterns	Role defined plainly (“\$ whoami — frontend engineer”) with a clear “I build...” statement.	Good
List content	Bulleted services and skills lists present (list-snippet eligible).	Good
Table content	No comparison/specs tables — a small missed table-snippet opportunity (e.g. a stack/tools matrix).	Needs Attention

Structured Answer Formats

Signal	Finding	Status
FAQ schema	FAQPage JSON-LD with 7 Question/Answer pairs, correctly structured.	Good
HowTo schema	None — not applicable to a portfolio.	N/A
Question-phrased headings	FAQ uses natural-language questions matching how users and voice assistants phrase queries.	Good
Speakable schema	SpeakableSpecification present — voice-assistant friendly and rare for a portfolio.	Good

Voice Search Readiness

Signal	Finding	Status
Conversational language	FAQ copy is natural and conversational.	Good

Signal	Finding	Status
Long-tail question coverage	FAQ covers role, stack, availability, Web3 experience, past clients, contact and location/remote policy.	Good
Local signals	Remote-first; location referenced in FAQ. No NAP/LocalBusiness — correct, since this is not a local business.	N/A

Priority Recommendations

Priority	Issue	Dimension	Effort	Impact
High	Trim project-detail meta descriptions to ≤160 chars. Site-wide template (~22 pages); verified at 326 / 333 / 325 / 308 / 200 chars. Currently truncated in search results.	SEO	Low	High
Medium	Add lastmod (and optionally changefreq) to every sitemap.xml entry to give engines a freshness signal.	SEO	Low	Medium
Medium	Add ItemList/CollectionPage JSON-LD to /projects/ and Person/ProfilePage JSON-LD to /resume/ to close the two schema gaps.	SEO / GEO	Low	Medium
Medium	Publish a short writing/notes section (3–5 posts on frontend, ICP, Web3). Biggest lever for AI-engine citation — adds original, citable long-form text.	GEO / AEO	High	High
Quick Win	Give /projects/ and /resume/ their own OG images instead of the generic og.png for better social/share previews.	SEO	Low	Low
Quick Win	Add a testimonials / recommendations or press-mentions block to strengthen E-E-A-T trust signals.	GEO	Medium	Medium
Quick Win	Add a specs/stack comparison table and/or a short FAQ to project pages for table- and FAQ-snippet eligibility.	AEO	Medium	Medium

What's Working Well

✓ Fully server-rendered HTML	curl returns the complete H1, body copy and JSON-LD without running JavaScript — search and AI crawlers see everything.
✓ Rich, valid structured data	Homepage: WebSite, Person, ProfilePage, Occupation, Place, FAQPage (7 Q&A), SpeakableSpecification. Every project page: BreadcrumbList + CreativeWork.
✓ Complete social metadata	Open Graph (image 1200×630 + alt), Twitter summary_large_image, and self-referencing canonicals on every page.
✓ 100% image alt-text coverage	Homepage 10/10, projects index 15/15, project detail 1/1 — no missing alt attributes found.
✓ Clean crawl infrastructure	Keyword-rich URLs, a clean robots.txt (only /thankyou blocked), and a 24-URL sitemap.
✓ Strong entity & E-E-A-T signals	Named author, 9+ years, real marquee clients, and sameAs links to LinkedIn / GitHub / Instagram.
✓ Rare AEO foundation	FAQPage + question-phrased headings + SpeakableSpecification — an answer-engine base most portfolios never build.

Glossary

SEO

Search Engine Optimization — making a site rank well in traditional search results (Google, Bing) via technical health, relevant content and clear metadata.

GEO

Generative Engine Optimization — optimizing to be cited by AI answer engines (Perplexity, ChatGPT Search, Google AI Overviews, Gemini) that synthesize answers from multiple sources. Rewards clarity, authority and factual richness.

AEO

Answer Engine Optimization — structuring content so search engines and voice assistants can extract a direct answer (featured snippets, People-Also-Ask, voice). Driven by clear Q&A formats and FAQ/Speakable schema.
