

Emmanuel Francis Ramos

Frontend Engineer

EXPERIENCE

CoDev — Frontend Engineer

February 2022 - Present

Odin.fun

- Developed and delivered frontend components for the Odin.fun platform from initial concept through production deployment. Implemented internationalization (i18n), established a scalable design system, developed comprehensive application theming, and integrated APIs and ICP canisters to support core platform functionality.

Toniq / Bioniq

- Assist in the development and execution of Toniq and Bioniq marketplace, digital marketplace where users can create, store, and exchange digital assets in a decentralized and non-custodial manner. It offers decentralized secure token bridging, eliminates trade, buy, or sell gas fees, and ensures nearly instant finality.

Freelance (Beyond Bytes, Bennusoft, CodingChief) — Frontend Developer

November 2020 - December 2021

TRR Technologies / XDevs — Creative Technologist

July 2018 - February 2021

Singapore Airline Official Website

- Revamp the existing website design and migrate from legacy Javascript code to Vue.js and Typescript

Singapore Biennale 2019

- Revamp the existing website design and contents for the upcoming Singapore Biennale 2019 events.

I2D2 (Intelligent Integrity Due Diligence) Platform

- Developed and implemented in-house Know Your Customer (KYC)/AML (Anti-Money Laundering) web application for a Bank using Nuxt.js.

Palantir

- Developed and implemented in-house employee portal web application for a Bank using Nuxt.js framework.

Caltex (Oil Finder)

- Developed and implemented new functionalities for a Caltex Oil Finder website using Nuxt.js framework.

All Range Trucks (ART)

- Created and launched a website offering a range of trucking equipment including tractor heads, dump trucks, wing vans, mixers, trailers, and more.

Hard Hat Asia

- I took charge of designing, building, and launching a marketplace website specifically for local hardware stores. This website features an efficient shopping system and enables convenient deliveries.

Xerkit — Software Engineer

August 2017 - July 2018

- Developed a NativeScript application that seamlessly integrates with the Xerkit IoT car product, enabling automated functions such as automatic ignition, air conditioning, and locking/unlocking mechanisms.

SKILLS / ROLES / RESPONSIBILITIES

Partnered closely with backend engineers, product managers, and designers to integrate RESTful APIs and JSON-based services, ensuring smooth end-to-end user experiences.

Led the development, modernization, and ongoing maintenance of responsive web applications, improving usability, performance, and overall user satisfaction.

Develop, test, and maintain scalable, reusable front-end code.

Identify and troubleshoot performance and scalability issues to ensure a smooth user experience.

Implemented accessibility, internationalization, and usability standards to create inclusive applications that support diverse users and global audiences.

Ensured consistent functionality and user experience across modern browsers, devices, and operating systems.

Participated in UI/UX reviews, technical discussions, and architectural decisions to enhance product quality and development efficiency.

STACK / FRAMEWORK

Language: Typescript, Javascript

Framework: ReactJS, VueJS

State management:

Vuex, Pinia, Redux

Styling / Framework:

Tailwind CSS, SCSS modules

Testing: Jest

Bundler: Webpack, Rollup

EDUCATION

University of Science and Technology of Southern Philippines — B.S. Computer Engineering

June 2011 - April 2017

C.M. Recto Ave., Lapasan, Cagayan de Oro City, Philippines, 9000
